September 12, 2019

We write to submit important new scientific research demonstrating that there are non-thermal biological impacts from cellphones and other wireless radiating devices. This research is directly relevant to this Notice of Inquiry and indicates the clear and compelling need to revise the guidelines for evaluating these devices.

Attached you will find the full issue of Wireless Radiation and Health, a special issue published in the Environmental Research Journal. This special issue presents highlights from selected presentations and discussions from the Expert Forum on Wireless Radiation and Health was held at the Hebrew University in Jerusalem, Israel on January 23-27, 2017, to evaluate human exposures and health benefits and risks from use of wireless devices and to identify priorities for future research.

Additionally, we have included editorials by Dr. Devra L. Davis and her commentary regarding the Chicago Tribunes article on the phones they tested (copy also included).
